

“The work done by the Forrer Business Interiors team was nothing short of incredible. They spent a great deal of time with us to gain a feel for what we wished to accomplish in the look of our new site. They truly partnered with us to make this happen. I felt that they had as much of a vested interest in our site as we did.”

– James Lorence, Clinical Director
ProHealth Care Medical Associates

ProHealth Care Medical Associates

Crossings Medical & Well Being Center

ProHealth Care Medical Associates' new 10,000 square foot well-being center serves as a new model for wellness and medical treatment. The facility marries three typically unassociated functions: retail and community space, a medical and well-being spa and a traditional clinic and testing facility.

Forrer worked closely with the ProHealth Care Medical Associates staff and HGA Architects to carefully select design elements that support the diverse roles of this new space. From paints and finishes, to furniture and accessories, each individual element was carefully selected to create a soothing, relaxing atmosphere, while also providing for maximum efficiency and accommodating safety needs.

By acknowledging the unique needs of all three areas while still focusing on the overall goal of creating a tranquil environment, the ProHealth Care Medical Associates team cast aside conventional ideas about healthcare design and drove a new architectural solution that unifies all three functions to create the ultimate healthcare and wellness environment.
