

## design services

At Forrer Business Interiors, our design approach is solution-driven. We are committed to creating work environments for our clients that are innovative, aesthetically pleasing, and above all -- functional.

With six full-time designers and a LEED Accredited Professional on staff, our design department is your total resource for new construction projects, renovations, moves, and reconfigurations, both large and small. We have a vast resource library, which contains the most current product information including brochures, specification information, and finish samples from hundreds of vendors. And because we employ sophisticated planning tools, such as SmartTools (a 3-D Rendering program), Computer Aided Design (CAD), and Computer Aided Planning (CAP), we can take you from 2-D to "true to life" to help you visualize your options before you settle on a design concept.

Your Forrer design team will help you find the right long-term solutions for your specific needs by getting involved during the initial planning stages of a project and working side-by-side with you all the way through to its completion. We can assist you with space studies and furniture planning, and provide you with design concepts, furniture and finish selection, drawings and budget estimates to help you accomplish your goals without compromising on value. And by putting our entire focus on your people, your processes and your strategies, we can help you transform your business.
