

asset management

As part of our dedication to providing ongoing service to our customers, we have developed an asset management program that helps our clients get the most out of their existing resources while eliminating the stress of managing and storing excess furniture. Our program allows you to utilize all or some of our services in order to best meet your needs. We can provide:

- **Asset evaluation and categorization**
- **Bar coding**
- **Report writing**
- **Storage**
- **Access to real-time inventory and reports**

Our full-time, highly-trained technicians use state-of-the-art bar coding and report writing software to identify and organize your assets by noting the manufacturer, size, finish, quality and condition of each item. This data is compiled and stored in a proprietary software program that allows you to access your inventory online using Ensync, a real-time web based program. You can manage your inventory off-site by developing custom reports to sort your assets by a variety of criteria, reorganizing your inventories, obtaining products from stock, or creating work orders for upcoming projects.

Or, leave it all up to us. We can manage your inventories, customize your reports, create and execute work orders, and save you time, money and worry in the process.
